

Ecowash

the multi programme environmentally friendly jetwash

Ecowash

The Eco Wash is a stylish and economic jetwash utilising the latest heat on demand technology. It has been designed with specification flexibility in mind, allowing it to be programmed to provide multi-cycle options to suit the toughest of cleaning regimes.

Employing state of the art technology for reliability, whilst the internal layout is such to allow ease of maintenance and access.

The cabinet is proportioned to allow adequate space for 2 x 25Ltr detergent drums, a water softener (option) and a spot free rinse system (option).

Whether working as a multi-cycle pre-programmed machine, as a buy-time (user selected cycles) machine, on a garage forecourt, in a distribution depot, council depot or as a fleet washer - with the clad-frame construction and proven components it represents versatility and strength to support the very diverse range of vehicles and contaminants on today's roads.

The Ecowash provides for a top quality car wash facility

Typical layout of Ecowash (optional RO and water softener not shown)

Typical plant details

The standard Jet Wash machine casing size is 840mm deep (with bowed door option) 1000mm wide and 1500mm high – not including booms.

To one side of the machine is a brush basket and the other a lance holder.

The recommended Slab dimensions shown here allow for a comfortable margin around the machine.
